TOYO INK INTRODUCES VERSATILE FOOD-GRADE INKS

ADDISON, Ill. — The comprehensive range of TOYO INK ink products is the result of many years of experience in industrial applications. Each ink undergoes rigorous testing before being released into the marketplace. TOYO INK products can be used to print on every type of substrate in the most demanding environments.

At Graph Expo & Converting Expo 2006, TOYO INK America will introduce a line of food-grade inks approved by the U.S. Food and Drug Administration (FDA).

TOYO INK's black and colored edible inks offer consistent quality and reliability for printing directly onto oral capsules, tablets and foods. TOYO INK edible inks can be used for gravure, pad and flexographic printing. The inks are available in red, blue, yellow, green, brown, black and white.

All ingredients in the inks, including colorants, are made from FDA-approved natural food additives and edible synthetic materials, so they are entirely safe and gentle to human body.

These inks contain no volatile organic compounds and be can be used to print drawing patterns or images that become part of the food. They meet the safety and quality requirement of printing on capsules and tablets, as well as food wrapping materials that directly touch foods.
