TOYO INK AMERICA TO SHOWCASE HIGH-SPEED, HIGH-PERFORMANCE HEATSET WEB INKS AT GRAPH EXPO

ADDISON, Ill. — TOYO INK high-performance inks for heatset web offset presses are specially formulated for drying under low heat energy conditions. Unlike other manufacturers' products, TOYO INK's heatset web inks are color-matched for the various proofing systems on the market. The result is contract color that precisely matches press sheets.

TOYOWEB FPS and KPS Premium Process Series inks allow printers to maintain consistent print quality on a wide range of paper stock. This new generation of heatset web inks delivers high strength and high gloss with low dot gain and stable emulsion curves. Each ink in the FPS and KPS series works flawlessly with modern proofing systems.

The TOYO K2 Heatset Process Series provides sharp printing, high contrast and excellent trapping. Low energy consumption saves money.

TOYOWEB MC (Master Color) Series affords balanced color and stabilized viscosities over short and extremely long magazine production runs. It promotes quick roll-ups and lower waste values, saving time and money.

To learn more about TOYO INK high-performance heatset web inks, visit Booth #2406 at Graph Expo & Converting Expo, October 15-18 at Chicago's McCormick Place.
